PROJECT 1 (TO-DO LIST WEB APPLICATION)

PROJECT OVERVIEW:

To-Do List 

Add

Data-structures Assignment

Web develepment

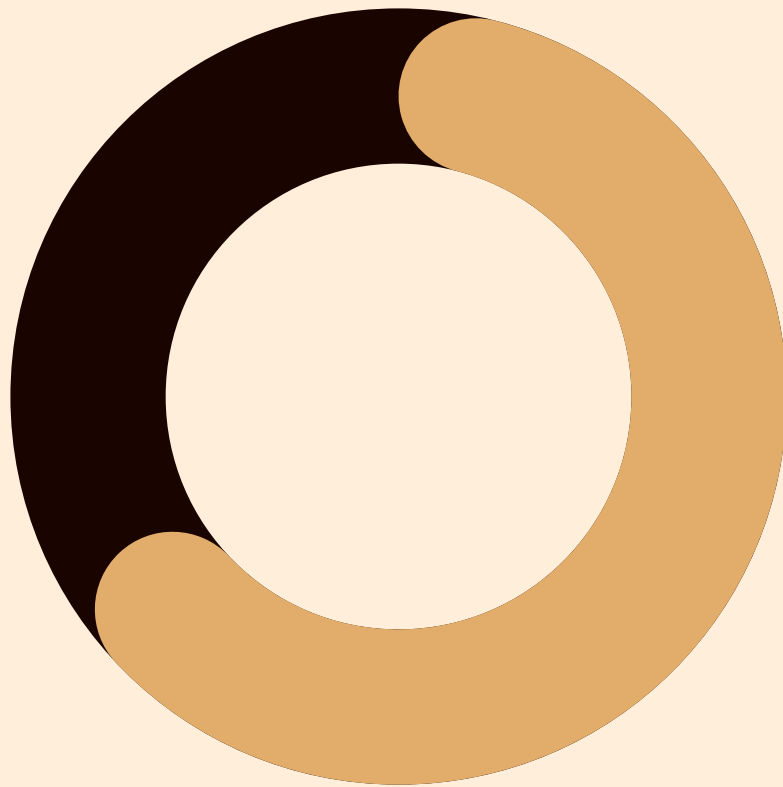

OBJECTIVES

- Create a user-friendly interface for easy task management.
- Ensure data persistence so tasks remain accessible upon refresh.
- Implement responsive design for use on various devices.

INTRODUCTION

- Add new tasks with titles and optional descriptions.
- Mark tasks as complete or pending.
- Edit and delete tasks easily.
- Intuitive buttons and forms for task management.

IMPLEMENTATION:-

Step-by-Step Development:

- Designing the layout in HTML.
- Applying CSS for styling and responsive design.
- Implementing JavaScript for task functionality:
 - Event listeners for user actions (adding/editing tasks).
 - Logic to persist tasks using local storage or a database.

DESCRIPTION

- A web-based application for managing tasks efficiently.
- Allows users to add, edit, and delete tasks, helping to improve productivity.
- This project includes a HTML file which provides the semantic structure to my TO-DO LIST.
- Next comes the CSS file which gives the styling for layout and aesthetics.
- Last comes the JAVA SCRIPT file which provides the functionality and logic for task management.

CONCLUSION

- This project is all about learning a new skill based upon web development and enhancing our productivity.
- Under this to-do list the targeted audience can easily comprise there overall to-do routine of a day at a single place which will make there work more easier.
- Here the targeted audience are mainly the students, professionals and all other working people.

THANK
YOU
